

CareFlow AI | Complete Entity Relationship Diagram

14 mapped tables | 15 foreign-key relationships | Current EF Core model and migration snapshot | 5 October 2026

Reading the diagram

PK = primary key. F01-F15 = foreign keys; match each labelled connector.

1 = exactly one; 0..1 = optional; 0..* = zero or many. ? = nullable column.

REF = application reference only; no foreign key is configured in this model.

Users therefore has no enforced relationship lines. REF fields are not foreign keys.

The two attachment links are independent many-to-one mappings, not one-to-one.

All scalar entity properties are shown. Navigation properties are excluded.
